

To "Greta Tungberg" and all working-class people's teenagers who eagerly fight to protect environment.!

First of all, we are against any characters cults and we acknowledge you rather as protesters (no like a legendary hero) who struggle against pollution of the environment, against pollute food and clothing, air, earth and sea and the whole environment of human life, with this point and perspective we speak to you. Your rise to defend the environment from any pollution is very valuable and human, but the first condition for any amount of victorious advance in the struggle for the environment depends on the insight of the basic cause roots behind environmental pollution. Because if you do not do that, not only fail but it is deception, it looks like mislead 5 billion workers all around the world and betraying the future generations struggle for an environment free of pollution. It's impossible to claim a fight against environmental pollution but disregard the seriously harmful and deadly causes behind that. Indeed, the roots of all destructions and environmental pollutions are only capital and accumulation cycle of profit. Without any class-struggle against capital there's no chance to get rid of all pollutions. The task of this post is a discussion about this topic. Every time becomes any talking about environmental pollution, immediately all institutions, governments, press, media and capitalist internet networks and even any protest movement just focus to concentrate only on global warming matter in the meantime they just gaze on that, they claim that the current environmental catastrophe is just limited to global warming and ending there !! That's just a huge deceit and distracting the public. The danger of global warming is just one of those terrible tsunamis in history of human life, but its depth and scope of the disaster is not the same what the institutes and governments have claimed, or they still do. Even UN has acknowledged that if the Paris Agreement would be perfectly executed but the earth's heat level will rise more than 3° C, the natural glaciers will melt, the seas water surface will increase up with 110 cm too, and the most important is that 680 million people living on the seaside (coastal residents) will be facing like getting caught in the grip of death, more than 30 billion tons of carbonic gas will be released and added to the current volume of pollutions each year. All these happen right now and of course rainwater, groundwater and seawater will become acidic, coral reefs (lung Seas), fishes and the whole aquatically lifestyle will be ending in extinction. Decomposed soil and lead metal, cadmium, arsenic mercury, nickel, aluminium will unfortunately be released and in the process of soil mineralization resulting in an outburst of epidemic diseases, genetic disorder, cancers and deadly respiratory illness and other environmental & humane disasters. All of this on a scary scale is a truth, but all of these are just (in best situation) a small component of environmental Holocaust disaster. The dimensions of these disasters are incredible high that all organic foundations of our existence have already buried. All foods, fruits, vegetables, breathing air, residential buildings, lands and streets, plains and deserts, seas, forests and rivers, medicine and treatment facilities etc. all of them are under the most horrifying anti-environmental onslaught which is deadly destructive.

Look at the facts:

Every decade after the second imperialist worldwide war has happened 5 or 6 atomic accident, Mayak explosion in Russia, fire and release of radioactive substances in the British nuclear reactors, explosion in the US nuclear facilities in Harrisburg, the Chernobyl explosion and the Fukushima incidents which are among the dreadful unforgettable ones. It's not just about these disasters but the production of raw materials for radioactive bullions which deadly threat all workers lives and

healths. Radioactive which is greatly dangerous threat to human life, although even after thousand years these wastes would have been deeply buried at a depth of a thousand kilometers but their radioactive radiation still will be remained. To extract uranium capitalists, excavate lands, mountains and plains while nature, human environment and animals are exposed to radioactive radiations. These abandoned places & locations are not protectable. Indeed, radioactive distribution and diffusion is a very security secret of capital !!, which pollute deadly the worlds seas & rivers and even the underground water resources. The Baltic sea is infected from the most radioactive in the world but however the countries which are involved in Baltic sea like Sweden, Germany, Denmark, Finland and France which considerably claim to be the pioneers of the environmental reforms. In Sabalan in Iran, the uranium drilling rigs has caused a cancer epidemic and the radioactive particles of drinking water has been increased by seven times. The extreme electronic development and the needs of batteries with high level storage capacities, increasing exponentially of electric cars include electrically conductive and formable metals. These metals such as beryllium (Be), strontium (Sr), radium (Ra) have low melting point and are seriously very toxic. These are very harmfully dangerous for nature, living species and human life. All of these are killing the workers but of course providing to increase galactic capital gains. According to report from World Wildlife Fund For Nature (WWF) that says over the past 4 decades 60% of wildlife from mammals to aquatics and poultries have been destroyed, the number of Latin American vertebrates has decreased by 89%, aquatic organisms in freshwater got lessened by 83%, the number of insects in Europe decreased to 20% over the past three decades lower than the former level. Eleven important forest areas of the world have been disappeared. Amazon, the Congo's rivers in area, Sumatra and Borneo in east Asia are among them. The WWF says also the exterminations of species and wildlife is between 100-1000 times hastier than the past. The UN claims that extinction of one million plant & animal species are imminent in the whole world too. From year 2015 onwards the total of plant & animal species is calculated approx. 8 million all around the world, which conforming the mentioned report that one eight of these species are seriously at risk of extinction. All these disasters are caused by mechanism of capital profitability and accumulation cycle. Apparently agricultural crops used to be as usual, but its mineral contents have been differed extremely during a short period of time. The workers even if would have access to foods, but still food shortages like a catastrophe threat them and their families in a corrupted dark world there capital growth accumulation transforms the human life's cells into capital gains which's been a precondition of survival of capitalism. No capitalist does consent that cultivation & harvesting of agricultural crops without a maximum use of all types of phosphorus fertilizers or fatal substances and toxins which causes diseases and killing pesticides or would invest any finances for profitability and capital gains. That's the matter of cause which prevents the vital minerals like vitamins, zinc, copper, iron and selenium to reach into plants and agricultural crops. 74% of the workers 'population in the world are suffering from the lack of A vitamin, 50% of them despite the use of nutritional supplements they still have a lack of magnesium and calcium. Decline of needed vitamins such (C) 25%, (A) 34%, (E) 60% and (D) 70% diseases and dead threat a huge crowd of workers population worldwide. An English institution says that the reducing important ingredients in potatoes, sugar beet, Summer Crops, strawberries and grapes are horrible scary, because of reducing of main mineral items like magnesium with 46%, calcium 76% and copper 59% in those agricultural productions content. With use of technical materials (Processing Aids) contains of

hundreds of substances to extend the life span, the change of colour, odour, aroma and taste of foods for low costs production and profitable sales. The same material in the preparation of medicine supplies, cosmetics, shampoo and soaps are used. Thousands of substances are also added to foods too. Blending 8 types of chemicals to strawberry, ice cream and other creams. All of these are killer of human life and also creating ascending profits for capital, of course. With these substances which creates allergies, asthma, eczema and the negative changes of skin (urticaria) etc... these all are transformed into human life, (carmines) which is an attractive and captivating red colour substance used in candies, syrups and pastries which lead to increase sale rate of them, would cause a serious lack of sleep called insomnia, ADHD, the harmful effects on fetus and aggressive reactions. The sweeteners Sorbitol which used in chewing gum causes intestinal problems like intestinal infection, brain diseases, muscle cramps, aggression and depression. The majority of these substances in the form of chemical synthesis get produced as soon as possible enters the human bodies so starting to harm the useful vital enzymes of liver. Another substance that get added in the production process of needful commodities of the people's daily food is phosphorus compounds. Phosphorus is an important element in human body which more than needed increase get absorbed by the body, would be very harmful. phosphorus which becomes used for canning, souring the taste of food or like a stabilizer being used by the markets and capital for most huge profits. Destructive effects of excess consumption for phosphorus compound is increasing and becomes the subject of shocking reports every day. Johns Hopkins university researchers and Alabama on 9700 people's bodies during 15 years says that increase in mortality is directly related with amount of absorbed phosphorus in the human body. Heart disease, decreased kidneys function capacity are among the side effects of high consumption of phosphorus. The researches prove that 72% of frozen foods have a huge amount of phosphate, 70% of semi-prepared foods like Chili, Taco and Chips including a lot of types of phosphorus compounds, also 57% of American machine-made breads contains a lot of added phosphate. The phosphate plays a role such as yeast and by adding it into fast production of bread costs minimum labour-force for capital which increase highly capital profits in meantime. The capitalists, for avoidance of the costs incurred by pest infestation and prevention of less of profits so they continue to use more pesticides. By doing this they extremely not only minimize the costs of reproduction even reducing and minimizing losses and wastes too. By resorting to pesticides as a vital component and integral part of value-added cycle into capital in the agricultural productions system and an important condition to gain most surplus value. The use of pesticides by capital which causes the insects, rodents, weeds, fungus, bacteria, worms, parasites, even spiders and birds get seriously harmed and fall into extinction. The pesticides that used to be use by capitalists are two categories, the first one must be protecting, increased fruiting of plants and extending the products lifespan. Another category gets used to be preserving textiles, wood, clothing, footwear, tents and water sediments in the filtration, boats and ships (Ecological Stability). Much of this toxin will still be remained in the plant's fat layer, fruits and plants. The DDT and the similar ones have the same affection. It's important to be aware about that from every ten grape, berries, citrus, apples, pears and bananas, nine of them have the same toxic substances and being pathogenic. The interactions of these anti-bio pesticides used by capitalists in the produced commodities (Cocktail Effect) on each other and complications of these toxins for alive creatures, wildlife including humans is an extremely terrifying subject. Capital, with the aim of reducing

product waste and achieving the highest profits rate, just like that only get used 51 different toxins in planting grapes. (Chlormequat) is one of these toxins that its destructive effects on hormones of sexual organs is well known. These toxins get saved in the trunk of trees and surviving in years, from them being transferred into fruits and then into human body. The capitalists utilize 41 toxins for citrus cultivation. Among these toxins (Imazalil) is extremely cancerous, complications of infertility and hormonal changes it has too. These toxins become stored in in citrus skin and even in fruitflesh. The pesticides being used by capital to decrease wastes of apples is more than 41 substances. (Carbendazim) One of these that's used and cancerous, hormonal changes and fetal complications though so minor, and infiltrates the trees from the stem, leaves into fruits. The number of pesticides which being used for pearl is 27 and one of them is (Tiabendazole) that is absolutely cancerous and causes goiter hormone changes. Banana plantation workers and their families become target in a terrible, anti-human way by these toxins. The kids of these workers and pregnant women with live fetuses that with the influx of these diseases one after the other get killed. The danger is so tremendous that even the global institutions of capital such as WHO is even unable to deny. The use of anti-bio pesticides increases resistance power of the bacterias, fungus, weeds and even mouses. The biocides such as other hormonal drugs not only cause disorders any organs of consumers of capitalist products and food stuffs, but also their increase in nature especially with long-lived cause disorder in all living things. The state institution of capital in Europe called European Food and Safety Authority (EFSA) that's where they are granting licenses for the production and operation of pesticides killing people and increase capital gains. The food production centers where that transfer substances with a specific genetic code into the bodies which decompose the basis of human genetics and infect them with unknown diseases and becomes worse every day. The multi-billion years old living nature get destroyed by capital and the capitalist profitabilities cycle. There is a complex organ in the body of living creatures which plays the role of the brain to produce protein which calls DNA. A part of DNA called genes which has codes of all proteins. The creatures have different genes but all of them got built from four molecules. Therefore, it's possible to transfer the genes between different creatures but man isn't aware totally from side effects of this transition. For ex. we know that by transmitting the bacterial gene of anti-insect into corn which strengthens the corn against pests. The aim of GMO (Genetic Modified Organism) is increasing the nutritional potential of crops and livestock, developing resistance to bacteria and fungi, pests and all of these because of lower production costs, creating new markets, compete with similar goods, work-force reduction and finally increase capital profitabilities . The onslaught of capital in this , area is world-shaking scary, the area that witnesses the most devastating genocide like the civilized killing of humans!! that's for capital is the important key to survival. The giants like Science Syngenta, Bayer Crop, Monsanto and ISAAA which have the task of engineering human thoughts and marketing for capital, and also Service For The Acquisition Of Agri-Biotech Applications International doing the same. An organization that introduce itself as an independent scientific institution. Even the approach of the capitalists to GMO has sped up the process of capital accumulation. With forcing the owners of small farms to sell their lands and attaching those farms to the property of the capitalists and adding them into the capital profitability cycle. The cradle of birth and growth of this was in USA. Under the Bush's father and son, the laws were enacted which were allowing the companies owning GMO's products that by scarifying the lives of many people in a

very wild way to maximize the speed rate of earn and gain as well as accumulate profits more and more. According to existing rules, the capitalists of GMO is not required to do research at the molecular level and reporting to the relevant institutions. No one except the managers, partners, responsible authorities and entities in charge at companies, couldn't be allowed to be informed about how it works. Furthermore, the transferred genes may in the long run bring the different results that before was unforeseen, because the production in small scale with a no-competitor gene of sterilized laboratory place is entirely different from the mass production centers which is full of different or similar genes. The pest began from USA but other great giant companies such European Bayer, Chinese and Japanese entering the competition markets in the following. The great companies for genetic technique are the owners of the discovered genes and by the law of " Technology Protection System " through the applied technique sterilize seed sown, GMO. The landlords, the farmers for next planting recourse to purchase fresh seeds from the gene production companies. This one is just one of the important causes of the bankruptcy of the millions of small farmers in Africa, Latin America, China and India. The wind & air, until before the plague of capitalism, were the vital phenomenons of life used by humans for a long time. With expansion of capitalism the mortality due to air pollution were increased around the world. The mortality that wasn't satisfied with death of children, the elder and patients with heart pulmonary diseases, it was threatening humanity to destruction and still does more and more every day. The sulfur and nitrogen oxide causes by fossil fuels in combination with humidity creates the acid that causes eyes irritation. These aides through breathing are transferred into blood and other organs of body, and of course will bring along the serious complications. Other pollutants like sulfur particles, carbon dioxide, carbon monoxide, carbon particles, aluminum, cadmium, quicksilver, carcinogenic substances, poly aromatics, phthalates, radioactivity, bacterias and fungus which become generated within the process of capitalist production and capital accumulation system which has created an explosive atmosphere by air pollution disasters. All these conventional altogether precludes healthy vision and causes pulmonary diseases and others. The destructive effects of air pollution on human health, and the role of these contaminants to create illnesses like lung infections, respiratory tract (Lung Disease), stroke, lung cancer and heart diseases ...etc. The break-out of these diseases in recent years has been expanding along the global invasion of capitalism in all aspects of human life, and it's been a long time that diseases like memory deterioration (Dementia), alzheimer, parkinson, and also neurological diseases has been included to them too. Before there was talk of traffic smoke and factories gases, nowadays the minor particles in air like heavy metals, carbon particles, nanoparticles of rubber and asphalt, sand particles and dust caused by swampland drying, and drying of the rivers been added too. All these deadly and pathogenic particles are totally inevitable results of the productive relation of capital, and its accumulation cycle. Other than the aforementioned diseases, some other one like brain degeneration (Degenerative Brain Disease) must be named too.

Dear " Greta"! and all loved ones who are eagerly active in a fight against all environmental pollution!!

What we said above it's just a drop of deep sea. The volume of lethal environmental contaminations as much as all the whole of the worlds seas, lands, and onshore, the

diameter of atmosphere, work and production centers, residential & non-residential areas, in products & artifacts and facilities, food & clothing and livelihood and everything which related to humans life. The question is that what and where the roots of all these calamities and disasters are? The answer is completely clear. The first cause and the main roots for all these miserly disasters is capitalism. Do you think that capital could has refused to create a hell world full of disasters for 5 billion workers worldwide!!! The logical answer is absolutely negative. If capital and its profitability cycle has burned the Amazon jungles, Iran's, Sumatra, Congo, Ghana and Ivory Coast, if it has destroyed 120 thousand square kilometers in a minute so it has nothing to do with mismanagement, lack of planning, unplanned policies or uninformed or ignorance of the owners of capital. The deforestation and distructions of jungles are the permanent need of the profitability of the capital and the desired increase in profits. If the huge giant companies belong to capital could do anything like the projects of Uranium enrichment to set up nuclear power plants is because of reducing production costs so low and increase the profits curve. It's capital which contaminate cultivation, planting and harvesting of edible products with the most deadly toxins, because by doing this it does reduce the production and supply costs, increase the longevity of goods, cheaper cost of bookkeeping goods and staffs while increase its galactic profitabilities in process. Capital poisons everything, from livable places to residents, kitchenware, footwear and clothing, drugs and medical supplies and all of our livelihood needs and converts everything into its profit. The water is poisoned and full of plastic and scrap and, wastes. Casting industrial wastewater into the seas, because waste disposal with less contaminations can increase production and distribution costs while decrease the profit rate. The production of capitalism is the production for profit and self-expansion of capital. Indeed, capital is ruling over the world. In this productive relation the human means nothing for that but profitability everything. The capitalism has been like this since the beginning, but every day is declining and more deadly. The hidden secret of capitalism's decline is also in nature of capital and the growth of capitalism in each step accompanied by the further growth of the organic composition of capital. A process that drives down profit rates and makes crises inevitable. Capital by its nature goes all the possible way to challenge of reducing profit rates and confronting crises as it stands. Reduce production costs at any price which is the destruction of human life could be one those importance's. As long as there's capitalism the environmental pollution and spreading outburst is unavoidable. The way to fight environmental pollutions caused by capitalism only must be crossed through an anti-capitalist front. In order to reduce any amount of environmental disasters which has been inflicted against human life we must fight strongly against the existence of capital. The important question is how this class war will be done? The real way of this anti-capitalist war and struggle is not be running around in the streets, it's not sit-down in front of the executive centers of capitalism, or sit-up in front of or hang on to the government and parliament of capitalists, it's not to be busy with chanting, vegetarianism and choosing a boat instead of a plane for traveling or even the boycott of buying this or that merchandise. The war against the environmental disasters of capitalism is a war on the ground that is real and a class war against capital. For this class-war against capital it will take a class-struggle of working-class, a power beyond the power of capitalism, and only the working masses of the world used to have such power. This power of working masses has to be organized global, the anti-capitalist organized council , demanding stop unnecessary production, all contaminants and materials which pollute our lives and livelihood, sea, foods, clothing, utensil, constructions,

planting and harvesting of agricultural products, process of production, maintenance and circulation of goods, demanding for prohibition of dam constructions, burning of jungles and deforestation, calls for all these demands. The struggle to fulfil these demands is one of the other fronts of the war against capital. Of course, capital will not accept these demands by no means and under no circumstances. Whatever will happen that is a real class war, between the workers of the world and the capitalist system. We workers, the working-class have all the needed power to win this class war. The working class can, in a blink, disrupt the cycle of capitalist production worldwide. It can bring workers and their historical ability of class-struggle into a global organized council movement and acting against capital. In this war, every aspect of our victorious advance will be forcing capital to stop from polluting any part of our living environment & livelihoods. The human environment will only be completely refined and purified of any pollutions when the working class of the world will abolish the wage-slavery system by an organized council struggle and will become dominant over the fate and the result of work and production. Abolition of wage labour and production for profitability & capital and replacing all these with production for a real physical & intellectual excellent welfare for humans. Let's raise the glorious banner of our anti-capital class-struggle worldwide.

Sept. 2019

The anti-capitalist workers of Iran
